

Potty Mitts - FAQ

Q: Do Potty Mitts resist liquids?

A: Yes! You can test this by dropping a drip of water onto the outside of the mitt. The water will bead up! If kids put their hand onto a liquid "puddle" on the toilet seat, the mitt will keep it from soaking through.

Q: Are Potty Mitts flushable?

A: Potty Mitts are not flushable. Kids continue to touch things as they exit the toilet. Keep the Potty Mitts on your child until they have finished opening the toilet door and have made their way to the sink to wash their hands.

Q: Do my kids still need to wash their hands?

A: Yes! Whatever they touched prior to entering the bathroom and putting the Potty Mitts on still needs to be washed off! Also, Potty Mitts provide general protection and can not guarantee to stop all germs that might exist in a public toilet.

Q: Should Potty Mitts be used for wiping my child's bottom?

A: No. Potty Mitts are intended for protecting your child's hands from the things they touch in the toilet, such as the walls, floors, toilet seat and flusher.
